

**Press Release
January 2002**

PANORAMA.net

EUROP SUPERVISION launches on the market the new version of Panorama SCADA software (.v8). Real innovative solution, this information system allows to use an internet navigator as Microsoft Internet Explorer or Netscape Navigator to monitor, control and pilot at distance an application.

For that purpose, Panorama.v8 integrates the last Web technologies in order to publish an existing or new application. These publication programs are separately delivered through an option called " PANORAMA.net " proposed according to the number of simultaneous connections to be served.

The construction of the Web site is made with the standard development PANORAMA Package (PANORAMA.studio) which avoids the intervention of supplementary tools such as Frontpage or Interdev. The on-line publishing of the application on protocol " http " is then made by automatic conversion. Therefore, every user working with the previous version of the software package should simply pass in version 8 and equip himself with PANORAMA.net.

Technical presentations are sheduled everywhere in France through a series of about twenty roadshows during all year.

Characteristics

- Setting up of the Web server PANORAMA.net next to a classic application
- Installation of the Web server which accomodates the Panorama application under Windows 2000 server
- Publication of virtual directory with Internet Information Server which is elementary supplied under Windows 2000 equipped with the last security packs

Advantages

- Access by thin clients running on the company's or factory's intranet network or on the extranet via internet for the mobile staffs and the customers
- Only one application to integrate and maintain
- Possible integration of consulting pages on a web portal company
- 7 security access levels
- Possible zoom on consulting pages
- Independent long-lasting technologies of the navigator and runtime systems on monitoring stations

About Europ Supervision

EUROP SUPERVISION, the sales and support organisation, and Codra, the product development organisation, have merged to form a single organisation with a turnover of 8 million Euros and with a capital of 3 million Euros. The organisation is the number one producer of SCADA product in France and also one of the market leaders within Europe. Panorama has been developed since 1987 by SCADA specialists. It allows technicians, control engineers and process engineers to develop and run their own Windows based applications. Panorama comes complete with all features including networking, communications, scripting, recipe and mathematics modules which enable the most flexible working environments possible to be easily generated for process operators.
