

**Press Release
January 2002**

PANORAMA.pocketPC

EUROP SUPERVISION launches on the market the new version of Panorama SCADA software (.v8). Real revolution, this information system allows to use a PDA (Personal Digital Assistant) furnish with the operating system Windows CE 3 "PocketPC". For that purpose, Panorama.v8 integrates the newest communication technologies to serve an existing or new application on mobile PocketPC.

These publishing programs are separately delivered through an option of the catalogue "PANORAMA.net " proposed according to the number of simultaneous connections to be served. The integration is naturally made with the PANORAMA standard configuration tools. The application is then on-line published automatically to be consulted at once. Every user working with the previous version of the software package should simply pass in version 8 and equip himself with PANORAMA.net.

Technical presentations are sheduled everywhere in France through a series of about twenty roadshows during all year.

Characteristics

- Setting up of the Web server PANORAMA.net next to a classic application
- Installation of this server under Windows 2000 server
- Consultation on mobile PocketPC via the wireless Ethernet network (IEEE 802.11 standard / 2,4Ghz) or via GSM/GPRS
- All the SCADA functions are available on PocketPC as Ipaq, Jornada, Casio, Toshiba or Phone PocketPC as Sagem, Mitsubishi...
- Encoding of the radio link on 128 bits
- Transfer, on the mobile unity, of a message on alarm or on event with the module "PANORAMA.emails"

Advantages

- Mobile access on the company's or factory's intranet network or on the extranet via internet for the mobile staffs and the customers out of the office or at home.
- Decentralization of the exploitation with possibility of being automatically called.
- Consultation of any information and possible piloting via the mobile unity using the local / distant mode by being directly on the installation.
- The use of the PDA allows an easy transport and also allows to associate other functions such as phone, electronic mail, GPRS, the use of office products such as Microsoft Excel or Word
- Only one application to integrate and maintain

About Europ Supervision

EUROP SUPERVISION, the sales and support organisation, and Codra, the product development organisation, have merged to form a single organisation with a turnover of 8 million Euros and with a capital of 3 million Euros. The organisation is the number one producer of SCADA product in France and also one of the market leaders within Europe. Panorama has been developed since 1987 by SCADA specialists. It allows technicians, control engineers and process engineers to develop and run their own Windows based applications. Panorama comes complete with all features including networking, communications, scripting, recipe and mathematics modules which enable the most flexible working environments possible to be easily generated for process operators.
